

GEOGRAPHY: The USA

A map of USA divided into states.

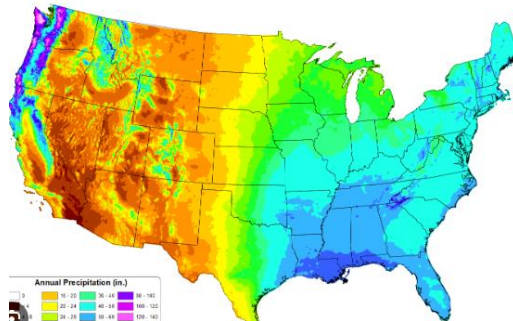

The United States of America (USA) is a big country in North America. It's surrounded by Canada to the north and Mexico to the south.

The USA has lots of different physical geographical features such as rivers, mountains, lakes and deserts.

The USA has a range of different human geographical features. There are many large cities and lots of recognisable landmarks.

The USA has a variety of climates. In the northern states, it can be very cold with lots of snow in the winter, while in the southern states, it's usually much warmer.

New York City, often called the "Big Apple," is one of the largest and most famous cities in the world. It's known for its tall skyscrapers, bustling Times Square, and the Statue of Liberty. It was the place where migrants travelling to the USA first landed.

The USA is made up of 50 states, each with its own name, flag, and sometimes even its own laws.

GEOGRAPHY: The USA

Country - a country is a big piece of land with its own special name. It's like a huge neighborhood where lots of people live, and each country has its own rules, traditions, and even its own flag.

State - a smaller part of a country.

New York - New York is a really big and exciting place in a country called the United States. It's like a super special part of the country with its own name

Landmark - landmarks are special and important places that are easy to recognize because they are so unique and interesting. They can be really big, like a famous building, a mountain, or a statue. They're like the superstars of a place, and people often use them to find their way around.

Climate - climate is what the weather is like in a certain place over a long time. It's not just about whether it's sunny or rainy today, but more about what the weather is usually like in that area throughout the year.

Migrant - is someone who moves from one place to another. It's like when you go on a vacation to visit a different city or country, but for migrants, it means they are moving to a new place to live for a longer time. People might be migrants for various reasons, such as finding a new job, living in a safer place, or just wanting to experience a different way of life.

Physical features - are the natural parts of the world that you can see and touch. These features make the Earth interesting and unique. Mountains, rivers, oceans, forests, and deserts are all examples of physical features.

Human features - interesting and unique things about how people live and interact with the Earth. It's like exploring the different ways people build their homes, create communities, and live together. Human geography features include cities, towns, villages, and the special things people do in those places, like celebrations, traditions, and the foods they eat.
